About Me

I design data-dense, rules-heavy App and Web products. I partner with business, PM, and engineering to define requirements, map user journeys and information architecture, and validate solutions through wireframes, prototypes, high-fidelity UI, and usability testing. For handoff, I build primitive, semantic, and component-level Design Tokens aligned with frontend CSS/Sass. Beyond Figma, I implement production-ready frontend experiences and assess feasibility from the wireframe stage—reducing design-engineering gaps at the source.

Experience

Product Designer · Design-to-Frontend
Spotx Studio (2022–Present)

Enterprise Benefits Platform · ZOT
Lead UI/UX Designer | PM, Frontend & Backend

- Separated annually changing benefit rules into “structure” and “parameters,” enabling committee admins to update values without engineering
- Validated eligibility upfront, disabling ineligible options at application time and eliminating manual tier checks for reviewers
- Reframed a 10-step paper approval process into five explicit digital states, giving every case one clear status and reducing follow-up
- Aligned Semantic Tokens with frontend CSS/Sass to minimize design-development gaps

Bed-Exit Alert Dashboard · UNEO
Lead Designer & Frontend Developer | Backend, PM & Sales

- Made the real-time status of 40 beds readable at a glance with no interaction, helping nurses monitor the ward as they move
- Balanced business and user needs through a collapsible panel that supports both without compromise
- Used Heatmap Tool and Usability testing to confirm focus landed first on urgent alerts and bed numbers
- Completed three iterations before high fidelity; early backend feasibility checks meant nearly zero frontend rework
- Owned design and frontend for pixel-accurate delivery; deployed to 15 care facilities and about 50 nurses

Cross-Platform Community App Redesign · Churchplus
Lead UI/UX Designer | PM, App Engineers & 8-Member Committee

- Facilitated an 8-member committee, using low-fidelity wireframes to turn subjective views into user-centered consensus
- Consolidated nine fragmented modules into five core pages, reducing structural complexity by 40%
- Built a scalable Design System from scratch, delivering a consistent experience aligned with native iOS and Android behavior
- Designed a modular architecture that lets 100+ branches enable only the features they need

Gaming Hardware Control App · Acrox
Lead UI/UX Designer | PM & App Engineers

- Clarified an 80%-undefined scope through modular flows and visual prototypes, turning abstract logic into decisions stakeholders could understand and approve
- Simplified complex macro and lighting setup into visual controls, using progressive disclosure for beginners without limiting experts
- Built a scalable Design System from rough sketches to unify complex settings
- Designed an “Analog Key Travel” animation that visualizes pressure data in real time, bridging software and hardware

Product Designer · Design-to-Frontend (cont.)

Spotx Studio
2022–Present

User Research & Usability Testing

Tree Testing, Usability Testing & Quantitative Surveys

- Industry Intelligence: Used tree testing to validate information grouping against users' mental models, then verify the new hierarchy with the same method. Two rounds confirmed the revised taxonomy and flows with evidence rather than intuition
- Bible Coach: Ran moderated testing before development, measuring completion rate, TTFV, and SUS to turn friction into prioritized issues. The first round set UI priorities; unique participants across rounds prevented learning bias

Design Systems & Handoff · Cross-Project

- Built and maintained primitive → semantic → component Design Tokens and a Component Library for consistency and faster delivery across products
- Delivered specs and annotations aligned with frontend CSS/Sass naming, reducing engineering handoff cycles

Media Team Lead

TCOC
2023–Present

Implemented Project Operations System

Introduced standardized project management in Notion, removing cross-team information silos and creating consistent visibility into distributed work

Led Brand Redesign & Multimedia Production

Led the website redesign and brand visual evolution, and guided the team through in-depth interviews and event documentary videos

Visual Designer

In-well Limited
2021–2022

Data Visualization & Conversion Marketing

- Translated complex product data into clear visuals that helped customers compare options and make purchase decisions
- Produced advertising and campaign assets aligned with marketing strategy

Education

BSc (Hons) in Hotel Management

The Hong Kong Polytechnic University
2016–2020

2016–2020 Internship: Sunworld Dynasty Hotel Taipei, Executive Floor Reception (6 months)

Skills

Product Design

Figma (Auto Layout / Components / Variants / Prototype), User Journey, User Flow, Information Architecture (IA), Wireframing, High-Fidelity Interactive Prototyping, RBAC Permission Mapping, Data-Dense Interfaces

UX Testing & Research

Tree Testing, Task-based Testing, Moderated Usability Testing, Completion Rate / TTFV / SUS

Frontend Implementation

HTML5, CSS3 / Sass, Tailwind CSS, Bootstrap, Responsive Web Design (RWD), jQuery

Tools · AI Workflow

Notion, Make.com Automation, Claude / Gemini (Requirement Synthesis, Edge-Case Mapping), Rive / Lottie
